

# Care Insights Multi-Source Intelligence

When multiple partners share risk, your providers shouldn't feel it.

Healthcare isn't powered by a single data source. Aggregators and payers often share members. Risk is layered. Incentives overlap.

Multi-source intelligence ensures your providers see every relevant diagnosis gap inside the EHR. No duplication. No conflicting signals. No extra clicks.

## What Multi-Source Does

Multi-source enhances Care Insights by allowing **diagnosis gaps from multiple data partners** to surface in one unified workflow. When the same patient has gaps from multiple sources, Vim:

- ✔ Displays gaps from all applicable sources
- ✔ Preserves risk model integrity
- ✔ Sends actions back to each source appropriately
- ✔ Intelligently consolidates duplicates

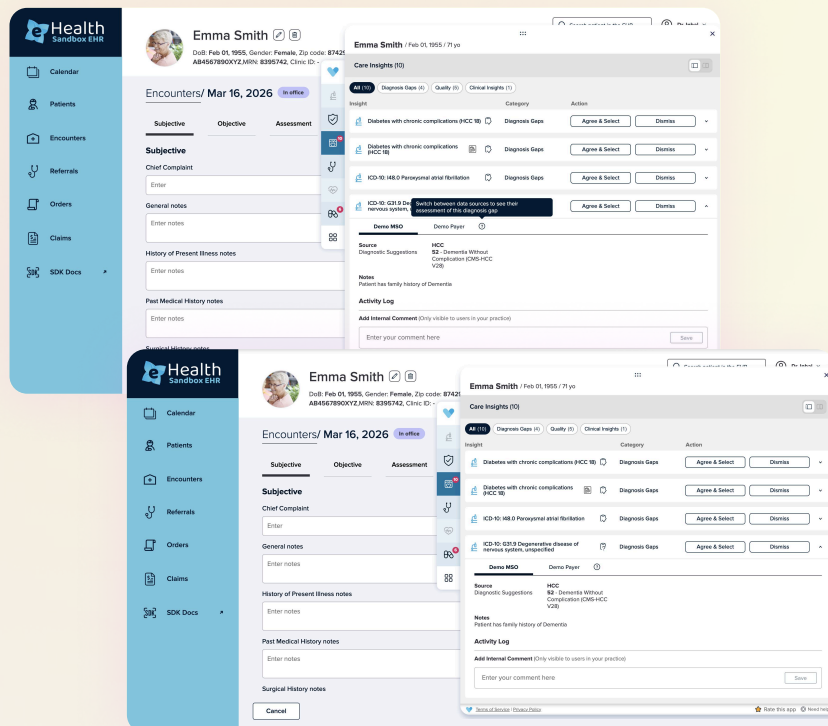

**Providers take one action. Every stakeholder stays aligned.**

## Intelligent Consolidation

Multi-source merges gaps only when it makes clinical and operational sense.

- Single-condition gaps (ICD-first) consolidate when they point to the same condition and risk category
- Category-based gaps (HCC-first) consolidate when they align under the same risk model
- No cross-risk model merging
- No swallowing high-confidence recapture opportunities

**The result:** clarity for providers and precision for partners.

# Care Insights Multi-Source Intelligence

## Seamless Provider Experience

Multi-source doesn't change the workflow. It strengthens it. **When a provider:**

### Agrees

- Suggested codes from all relevant sources are consolidated for accurate diagnosis
- Codes selected by the provider write back to the EHR
- Feedback is routed to each relevant data partner

### Dismisses

- The provider selects one dismiss reason
- Vim maps it appropriately across partners

## Why It Matters

Multi-source drives measurable impact

### For Providers

- Fewer repetitive gaps resurfacing from different sources
- Cleaner workflow
- Faster and easier decision-making with higher confidence in gaps identified by multiple data sources

### For Payers & Aggregators

- Higher engagement
- More gaps closed across shared-risk members
- Accurate, source-specific feedback

### For Your Organization

- Reduced friction in risk-sharing environments
- Greater visibility into member opportunity
- Stronger alignment across the ecosystem

## Built for the Real World of Shared Risk

Healthcare risk is collaborative. Your data layer should be too.

With Multi-Source Intelligence, Care Insights ensures every relevant diagnosis opportunity reaches the point of care: clearly, confidently, and without chaos.

**One patient. One consolidated view. One moment to act.**
