

# Care Insights on Epic

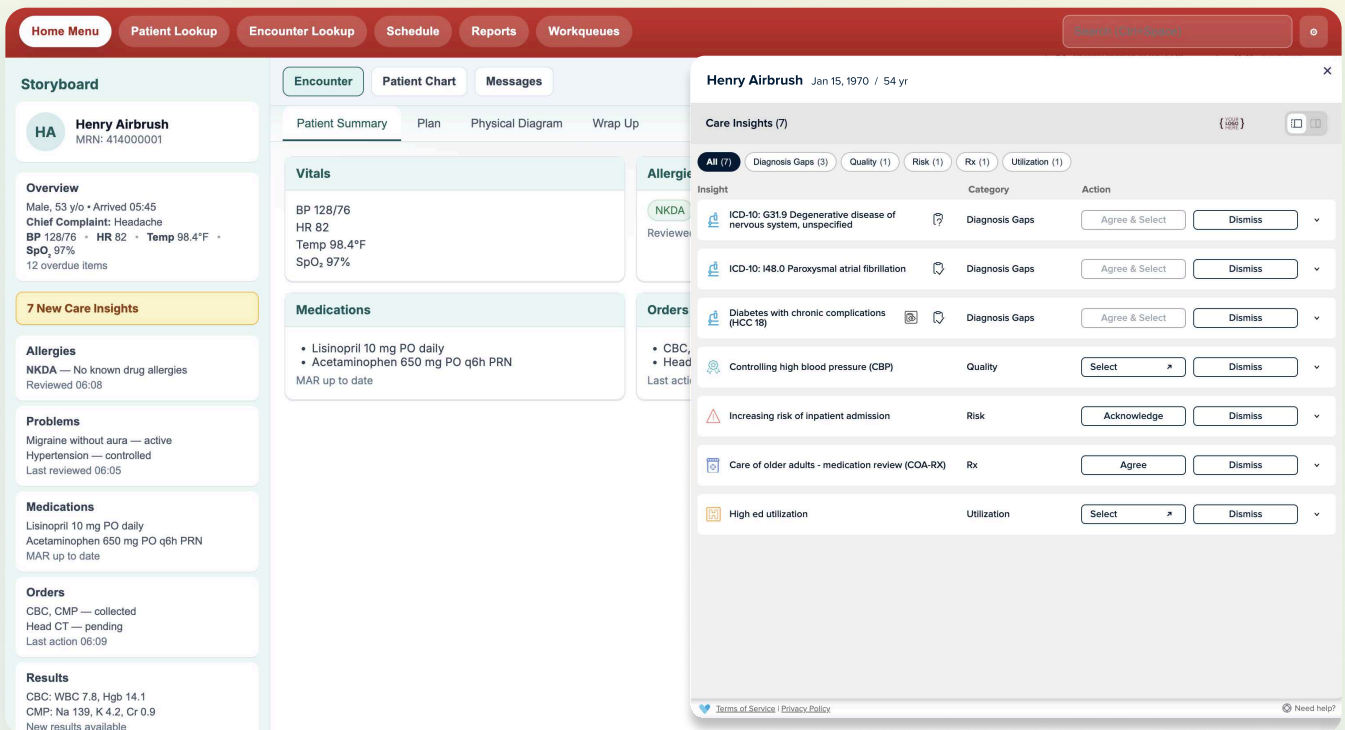

A smarter way to surface the right information at the right moment

Vim Care Insights is a Smart on FHIR application that works natively inside Epic to deliver real-time, context-aware clinical insights without disrupting workflow. Powered by Epic CDS Hooks and secure FHIR read/write, Care Insights turns payer programs and clinical data into actionable steps care teams can take during the visit, not after it.

## How it works inside Epic

Care Insights appears exactly when a clinician needs it. Epic triggers a CDS Hook as soon as a patient's chart opens. If there are relevant insights, the clinician receives a quiet, timely notification inside the workflow they already use. One click launches Vim's Care Insights in context: no toggling, no extra systems, no copy-and-paste.

Once opened, Care Insights automatically inherits patient context through Smart on FHIR. Clinicians see all gaps, opportunities, and recommended actions in a single view, designed for fast review and quick decision-making.

The screenshot displays the Epic Care Insights interface for patient Henry Airbrush. The interface is divided into several sections:

- Home Menu:** Includes links for Patient Lookup, Encounter Lookup, Schedule, Reports, and Workqueues.
- Storyboard:** Shows patient information for Henry Airbrush (MRN: 414000001), including Overview, Allergies, Problems, Medications, Orders, and Results.
- Encounter:** Displays patient vitals (BP 128/76, HR 82, Temp 98.4°F, SpO<sub>2</sub> 97%) and medications (Lisinopril 10 mg PO daily, Acetaminophen 650 mg PO q6h PRN).
- Care Insights (7):** A list of insights categorized by Diagnosis Gaps, Quality, Risk, Rx, and Utilization. Each insight includes a description, category, and action buttons (Agree & Select, Dismiss, Acknowledge).

Insight	Category	Action
ICD-10: G31.9 Degenerative disease of nervous system, unspecified	Diagnosis Gaps	Agree & Select, Dismiss
ICD-10: I48.0 Paroxysmal atrial fibrillation	Diagnosis Gaps	Agree & Select, Dismiss
Diabetes with chronic complications (HCC 18)	Diagnosis Gaps	Agree & Select, Dismiss
Controlling high blood pressure (CBP)	Quality	Select, Dismiss
Increasing risk of inpatient admission	Risk	Acknowledge, Dismiss
Care of older adults - medication review (COA-RX)	Rx	Agree, Dismiss
High ed utilization	Utilization	Select, Dismiss

# What Care Insights Delivers

Real-time diagnosis and quality gap detection

Care management prompts and utilization insights

Context-aware triggers based on payer and provider logic

A unified snapshot of what matters for this patient in this moment

## Workflow that feels native

Care Insights is intentionally simple at the surface and sophisticated underneath. It fits inside Epic like an extension of the chart and is fast to load, easy to navigate, and built for minimal clicks.

## Intelligent automation with auto-resolve

When clinical evidence already exists in the chart, Care Insights automatically resolves gaps in the background. No manual review. No closing tasks one by one.

## Writeback to Epic

Clinicians can document ICD-10 codes, CPT II codes, and other actions directly from Care Insights. All updates write back securely into Epic using standard FHIR operations, keeping documentation accurate and eliminating redundant data entry.

## Streamlined chart extraction

Care Insights can trigger automated chart extraction from within the application based on agreed-upon events, ensuring clean, timely documentation support without burdening clinic staff.

## Why provider organizations choose Vim Care Insights on Epic

- **No disruption:** insights land directly in Epic's native workflow
- **No switching systems:** everything loads in context, instantly
- **No administrative drag:** automated resolution and writeback remove low-value work
- **Better alignment:** payer and provider logic show up in one shared view
- **Faster performance:** care teams act on the right information at the exact right time

Experience it for yourself today.
